REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: claim 1 is patentable over the prior art of record because of the specific configuration of the imaging device, which has an electronic control to control the speed of the imaging device, the speed being set at an intermediate speed when it is determined that the number of sheets to be printed equal to or less than a predetermined number and the speed being set at a high speed when said determined number of sheets to be printed is more than said predetermined number. The combined limitations as currently claimed are not taught or suggested by the prior art of record considered alone or in combination.

Claim 17 is patentable over the prior art patents and printed publications because of the specific configuration of the imaging device, which has an electronic control to operate the imaging device at an intermediate speed when said imaging device initiates printing, to determine that more than a predetermined number of more than one sheet is part of the print job being printed at said intermediate speed, and to change the speed of the imaging device from said intermediate speed to a high speed in response to said determination of more than predetermined number of sheets after printing at least one sheet. The combined limitations as currently claimed are not taught or suggested by the prior art of record considered alone or in combination.

Claims 2-16 and 18 are allowed because they are directly or indirectly dependent from claims 1 and 17, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nishiyama (US 6,785,484) teaches an image forming apparatus having a speed-controlling device that changes the copying speed of the apparatus from a high speed to a lower speed when a determined number of sheets reaches a predetermined number so as to keep the temperature of the fixing roller within a permissible range. Nishiyama thus fails to teach the switch of the recording speed from an intermediate speed to a high speed when a determined number of sheets reaches a predetermined number.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai C. Pham whose telephone number is (571) 272-2260. The examiner can normally be reached on M-F 8:30AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vip Patel can be reached on (571) 272-2458. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
